EFI.Station

The EFI.Station is our installation base.

The fast and easy implementation of the EFI.Station enables a resource- and time-saving introduction to digital materials management. Any existing procurement structures can remain in place, if required.

With its cutting-edge ESM server technology, the EFI.Station can be used to map numerous business processes:

- Registration via NFC/RFID
- Access check
- Email notification
- Transmission to ERP in various formats
- Recording
- Access restriction

The formats, content and interfaces can be configured and programmed according to customer requirements – whether they are using IDOC, TXT, CSV, XML or EDIFACT.

Optionally, the system can be equipped with either an LTE or Wi-Fi module, meaning that no connection to the company network is required.

ALL THE ADVANTAGES AT A GLANCE

Why digitizing your material procurement with EFI is worthwhile, with a fast payoff on your investment

01 FOUNDATIONS
Digitizing procedures in the areas of manufacturing, warehousing and procurement

Continuous electronic processes without media disruptions

02 ORDERING MADE EASY
Time-saving and easy to use

Follow-up orders placed automatically using sensor technology or at the touch of a button

03 ACCURATE STOCK FIGURES AND RISK MANAGEMENT
Transparent consumption thanks to „posting before withdrawal"

Subsequent entries no longer required, electronic requisitions

04 FLEXIBILITY THANKS TO SCALABILITY
One solution for all requirement areas

Centralized digital materials management, coupled with optional decentralized warehousing directly at the manufacturing site

05 SMART AND EFFICIENT
Easy implementation

Step 1: Stand-alone. Starting the system requires no access to the company network.

Step 2: Fully integrated. Individually configured interfaces and formats, or use of existing structures.

ALWAYS THE BEST WAY FOR YOUR GOALS

Needs assessment & concept development

From the initial meeting to implementation to on-site support in our individual departments, EFI is your partner for every service from A to Z.

Project development & planning

We coordinate with you to define the simplest and easiest way to introduce digital materials management at your company. Together, we will build flagship projects in your company and make digitization visible for everyone.

Configuration & adaptation of your data provision

We examine and assess your data structures in advance – to make the launch and set-up of your digitization project as productive as possible and avoid surprises from the outset.

Implementation & installation of hardware

You focus on your core business, while we set up a customized EFI digital concept on your premises. The highest quality and efficiency are guaranteed - because we are professionals who understand your needs!

Software administration & user training

Support innovation in your company! We make digital materials management tangible for you and your team and in doing so create an interest and the motivation to shape the future.

On-site support & organizational development

Digitization is not merely investing in hardware and software – it is a philosophy and a hands-on strategy for a new process culture. We work with you to turn cost centers into team workers, thus creating a new process culture.

Need-based & customized software adaptation

Do you have special requirements? At your request, we will individually and pragmatically tailor your interfaces and our software to create the ideal smart solution.

First-level support

After the project comes the next project. EFI Ordersystems defines itself as an innovation partner – so our responsibility does not end after installation and training, but continues.
